

# CS 1511 Homework 5

Mathew Varughese, Justin Kramer, Zach Smith

Wednesday, Jan 30

**9.**

If a C program can output  $x$  and another C program can output  $y$ , a program can be made which calls both of these programs in order. Effectively, this would output  $xy$ . Here,  $c$  would be the bits required to create this program that calls the two other program.
