CS 1511 Homework 5

Mathew Varughese, Justin Kramer, Zach Smith

Wednesday, Jan 30

9.

If a C program can output x and another C program can output y, a program can be made which calls both of these programs in order. Effectively, this would output xy. Here, c would be the extra bits required to create this program that calls the other programs as subroutines.

10.

Since $\forall P(x)$
